SUMMARY

B.Tech CSE (AI & ML) graduate with hands-on experience designing, building, and deploying full-stack web applications and backend systems using Python, TypeScript/JavaScript, FastAPI, and REST APIs. Learning OOP, DSA, and the end-to-end SDLC from system design through testing, debugging, and cloud deployment with a track record of independently owning modules and integrating systems in real-world projects. Eager to contribute to enterprise-grade digital solutions within an Agile engineering team at TCS.

EDUCATION

B.Tech in Computer Science & Engineering — AI & ML — Joginpally B R Engineering College, Hyderabad (JNTUH Affiliated)
Nov 2021 – Jul 2025

EXPERIENCE

Research Analyst — Concentrix Jul 2025 – Sep 2025

- Handled inbound queries from US-based clients, resolved service issues via Knowledge Base, and documented interactions in the case management tool with full accuracy.
- Reviewed, classified, and validated incoming cases against predefined quality and resolution criteria directly applying audit principles to live workflows.
- Updated case management systems with accurate status logs, action notes, and compliance records after every interaction.
- Escalated unresolved cases through ticketing workflows and tracked end-to-end closure as per defined SLA procedures.
- Maintained strict confidentiality standards and followed all operational guidelines throughout the engagement.

Data Visualization Intern(Forge) — Tata Consultancy Services (TCS) Jun 2024(Remote)

- Translated client business requirements into structured analytical frameworks following SDLC phases (requirements -> design -> delivery); demonstrated clear understanding of the development lifecycle.
- Queried and validated large datasets using Excel and SQL; applied rigorous data validation and testing practices to ensure report accuracy before senior leadership presentation.
- Designed data visualizations translating analytical insights into actionable business intelligence for executive decision-making.

PROJECTS

AI Chatbot with Hybrid Retrieval | FastAPI, Sentence Transformers, RapidFuzz, Gemini API [Ongoing]

- Developing an AI chatbot that answers user queries using hybrid retrieval combining embedding-based semantic search and fuzzy matching, with LLM-based reasoning via the Gemini API.
- Supports real-time web augmentation with intelligent fallback and source-aware responses (AI, Internet, Excel) with confidence scoring and Top-K selection logic.
- Built a chat-based UI and backend features including session memory, query rewriting, caching, and logging for reliable, context-aware interactions via a FastAPI REST backend.

Goal Smiths — AI Financial Planner | React.js, TypeScript, Node.js, REST APIs

- Architected a full-stack personal finance application with a TypeScript/Node.js backend, REST APIs, and a React frontend; applied OOP and data structures for efficient state management.
- Built core goal-tracking logic that predicts whether a user's current spending pace will meet their set financial goals — providing spend-less or spend-more guidance with savings targets and timelines.
- Implemented real-time expense tracking, monthly bar chart analytics, and annual expense reports; debugged latency bottlenecks via performance profiling to ensure stable low-latency updates.
- Owned complete SDLC — requirements, system design, development, testing, and deployment — practising structured build, test, and release cycles.

A Hybrid Fuzzy Logic-Based Deep Learning Approach for Fake Review Detection. | Flask, CNN+LSTM, SQL, REST API [Published]

- Built a Flask REST API serving a CNN+LSTM hybrid model to analyze Amazon food reviews — CNN for sentiment feature extraction and LSTM for sequential authenticity detection, with fuzzy logic integration for decision reliability.
- Wrote SQL queries (joins, aggregations) for dataset preprocessing and validation with proper data sanitization; developed end-to-end pipeline with k-fold cross-validation and stratified splits.
- Achieved high accuracy in real-time review classification; published findings as "A Hybrid Fuzzy Logic-Based Deep Learning Approach for Fake Review Detection" in European Advanced Journal for Emerging Technologies.

My Checklist | *HTML, CSS, JavaScript*

- Built a task-management web app using vanilla HTML, CSS, and JavaScript with component-based design patterns — features include creating, listing, and persisting tasks with an interactive UI.
- Focused on clean state management, usability, and responsive layout for efficient user interaction. Live at checklists.ccbp.tech.

SKILLS

Programming Languages: Python, TypeScript, JavaScript, HTML, CSS

Core CS Fundamentals: Data Structures & Algorithms (DSA), OOP, Problem Solving, Algorithmic Thinking, SDLC

Web & Backend: FastAPI, Flask, Node.js, React.js, REST API Design & Integration, Backend Business Logic, HTTP

AI / ML: Sentence Transformers, CNN+LSTM, Fuzzy Matching (RapidFuzz), Gemini API, Confidence Scoring

Databases & Querying: SQL (Joins, Aggregations), SQLite, Firebase Firestore

Cloud & Version Control: AWS (EC2, S3, CloudFront) — AWS Cloud Practitioner Certified, Git, GitHub

Testing & Debugging: Debugging & Troubleshooting, Data Validation, Performance Tuning, Code Optimisation

Tools: VS Code, Power BI, Figma, Google Colab

Soft Skills: Agile Collaboration, Stakeholder Communication, Independent Module Ownership, Adaptability

CERTIFICATIONS & ACHIEVEMENTS

- Published Researcher: "A Hybrid Fuzzy Logic-Based Deep Learning Approach for Fake Review Detection" — European Advanced Journal for Emerging Technologies
- AWS Cloud Practitioner — Self Paced | Excel Bootcamp — Let's Upgrade
- Programming Foundations with Python | Build Your Own Dynamic Web Application | Responsive Website | Responsive Web Design using Flexbox | Introduction to Databases | Developer Foundations
